Zachary and Julie have bets about which forest is the most biodiverse. Julie says it's the Morgan

Arboretum that has 100 foxes, 90 rabbits, 104 black squirrels, 93 blue jays and 110 chipmunks.

Zachary is arguing that Oka park is waaaaaay more diverse with 150 foxes, 30 rabbits, 24 deer and

10 moose.

Can you settle the bet and prove who is right?
